

Your actions on the land matter!

Pet waste is not a fertilizer. When pet waste is washed into storm drains and ditches by rain and snow melt, it travels to our rivers and lakes. The bacteria and nutrients in pet waste can negatively affect aquatic life and recreation by causing unwanted plant growth, depleting oxygen, and carrying diseases that make water unsafe for swimming or drinking.

Please, respect our environment and clean up after your pet. Use a scoop or plastic bag to pick up the waste and place it in your trash at home.

Keeping
it Clean
